

# Village of Addison

## DEPARTMENT of Public Works

Date:

Dear Village of Addison Resident:

The Sycamore tree(s) on your parkway have been fertilized today and will be scheduled for a spring application as well. We hope to give these trees an added nutritional boost to help them cope with the stress placed on them by *anthracnose* (the fungal disease which causes spring leaf drop).

Cool, wet spring seasons usually provide the ideal environment for anthracnose and the resulting early tree defoliation. Sycamore trees typically put out their second flush of leaves in early July and appear vibrant and healthy. It is our hope that by fertilizing these trees, the Sycamore(s) on your parkway will be better equipped to cope and recover with enhanced vitality.

Sincerely,  
VILLAGE OF ADDISON

Tim Tokarz  
Electric/Forestry Foreman
